WHEN DO I MEASURE WITH WHICH TECHNOLOGY? – Practical examples for the use of optical and tactile measuring technology in modern surface metrology

Thorsten Höring, Mahr GmbH

In the case of surface analysis, the question is which measuring method is best suited. Using examples, the speaker discusses the strengths of tactile and optical technologies and explains how you can make a targeted selection. The valid standard for surface metrology (DIN ISO 25178) will also be examined.
