## **Inline measurement of the concentration of cutting oils and cooling lubricants with Schmidt + Haensch process refractometer IPR**

*Angelika Rau / Amri Chouba*

In many areas of industry, especially the metalworking, the use of cooling lubricants is indispensable. The control of lubricant oil concentration is important to ensure constant quality of the produced goods and to prevent the damage of the cutting tools.

Process refractometers allow to monitor and control the concentration in real-time.
